

PROFESSIONAL SOUND AND AUDIOVISUAL INTEGRATION  
**Church Sound Systems**

## St. Paul the Apostle Catholic Church, Gurnee, IL

Installed in 2017, Sound Planning replaced the original MediaMatrix and old Yamaha mixing console. The original system had served the parish for 20 years and was in great need of replacement.

A new Yamaha QL5 digital mixing console was integrated with a QSC Q-SYS digital signal processor (DSP). The DSP handles everything from mixing, audio routing and loudspeaker control. It also provides touchscreen control panels for simple operation when the sound engineers are not available.

St. Paul the Apostle is known for its wonderful musical program. To accommodate the musical needs, Focusrite REDNET preamps, and a redundant Dante network was installed for recording and premium-quality sound reinforcement.
